Dear Hiring Team,

I'm excited to apply for the Lead .NET Architect role with your client. I bring 8+ years across software architecture and full-stack engineering with a strong emphasis on .NET, domain-driven design, and evolutionary modernization. I design systems that are secure, scalable, and maintainable—and I enable teams to deliver them consistently through clear architecture guardrails, mentoring, and high-leverage delivery practices.

Highlights that map to your needs:

- .NET architecture: Clean/Hexagonal, modular boundaries, ADR-driven governance, performance & resilience reviews
- DDD & integration: strategic/tactical modeling, event-driven and messaging patterns, API-first design, contract-driven delivery
- Delivery excellence: CI/CD with GitHub Actions/TeamCity/Octopus, testing with Testcontainers & Playwright, observability with OpenTelemetry
- Leadership: mentoring, cross-team alignment, translating architecture decisions for both technical and non-technical stakeholders
- Banking/FS exposure: legacy modernization and high-volume data flows (tax reporting domain, insurance platform)

Recent impact: At Digitec Galaxus (Switzerland's largest e-commerce platform), I'm evolving logistics services for scale, introducing modular boundaries and event-driven patterns while establishing architecture guardrails (ADRs, review process, coding guidelines). Previously at Axpo (contract), I designed and delivered .NET services for an energy data platform with Azure-based CI/CD; at Swiss Life (contract), I improved API consistency and led a large SQL→SAP C4C migration.

Why this role: I enjoy owning system architecture end-to-end, guiding teams to high-quality outcomes, and partnering with stakeholders to connect technology to business goals. I'm fluent in English (C1) and German (B2/C1), comfortable in consultancy settings, and motivated by impactful client work in regulated domains.

Availability: 3 months' notice. I'm open to Lead and Principal tracks (market range noted in the description is aligned with expectations).

I’d welcome the chance to discuss how I can help your client deliver secure, scalable .NET solutions for their high-priority banking and financial services projects.

Kind regards,

Roman Weis
