Re: Software Engineer – Backend Lead

Dear Daniel,

I am writing to express my interest in the Backend Lead position at Manukai. Your mission of bridging the gap between metal part design and machining caught my attention because it connects directly to my own professional journey.

Before becoming a software engineer, I spent four years as an Aerodynamics Engineer at Ansaldo Energia. There I developed a design system for compressor blading geometries in Python which allowed us to replace the legacy Rolls-Royce system. This experience gave me a first-hand understanding of the path from engineering design to physical product.

Over the past eight years, I have focused on backend development with C#/.NET, building APIs, data pipelines, and automating CI/CD processes. Most recently, as Software Architect at Digitec Galaxus, I lead architectural decisions for backend systems in the area of logistics, supporting Switzerland's largest e-commerce platform.

What excites me about Manukai is the opportunity to combine both sides of my background in a young company where I can contribute meaningfully to the product and the team. I enjoy environments with short decision paths where I can work autonomously and see ideas through to completion.

I am currently employed with a three-month notice period and would be happy to discuss how I can contribute to Manukai.

Best regards,

Roman Weis
