Dear Hiring Team,

I am excited to explore the Principal Engineer opportunity within your client's innovation group. Across 8+ years in architecture and hands-on delivery, I have consistently shipped large-scale systems while guiding squads through ambiguous, multi-surface product bets. Today I lead technical strategy for logistics and customer experience platforms at Digitec Galaxus—Switzerland's largest e-commerce company—where we are building AI-augmented services that touch millions of shoppers. The Oliver Bernard role mirrors the scope I thrive in: setting the technical north star, incubating new experiences (AI, AR, mobile, web), and coaching talent so ideas travel from prototype to production safely.

**Why I'm a fit for the mission**

- **Technical strategy & execution:** I pair macro-architecture thinking (DDD, modular boundaries, event-driven backbones) with deep hands-on coding in C#/.NET, TypeScript, GraphQL, NestJS, and cloud-native patterns on Azure/AWS/GCP. I routinely own multi-track roadmaps balancing foundational work with rapid experiments.
- **Exploration & feedback loops:** I run design sprints, event-storming workshops, and telemetry-first launches to derisk new bets. Recent examples include AR-informed logistics UIs, AI coding agent pilots, and RAG-powered knowledge services rolled out with feature flags and canary releases.
- **AI & emerging tech:** Beyond integrating LLM copilots for engineers, I design production-grade LLM/RAG services with vector search, guardrails, and observability (OpenTelemetry). I also partner with external vendors (LLM platforms, experimentation tools) to extend internal capabilities.
- **Leadership & communication:** I mentor Staff/Principal engineers, align with product/design leadership, and translate complex topics for executives. My background in consultancy and startups keeps me pragmatic—guiding without ego while ensuring teams have clarity and psychological safety.

I am motivated by high-visibility roles where engineering excellence unlocks new customer journeys. Joining a global brand's internal incubator presents exactly that challenge. I am confident I can accelerate your client's roadmap by combining systems thinking, experimentation discipline, and a maker's bias.

I would welcome a conversation to dive deeper into the program's goals, discuss how I operate across squads, and share relevant work from Digitec Galaxus, Axpo, Swiss Life, and my own startup. Thank you for your consideration.

Kind regards,

Roman Weis
