Re: Domain Architect Ricardo Platform (f/m/d)

Dear Hiring Team,

I am writing to express my strong interest in the Domain Architect position for the Ricardo Platform at SMG Swiss Marketplace Group. With over 8 years of specialized experience in software architecture, Domain-Driven Design, and modernizing large-scale legacy systems, I am confident that I bring exactly the expertise needed to shape the architectural future of Switzerland's most iconic marketplace platform.

What sets me apart is my proven track record of successfully modernizing complex, business-critical systems while maintaining operational stability. Currently, as Software Architect at Digitec Galaxus AG—Switzerland's largest e-commerce platform—I lead the architectural evolution of warehouse logistics systems serving millions of customers. This role has given me deep expertise in applying DDD principles to highly complex business domains, driving cross-team technical initiatives, and balancing innovation with pragmatic delivery in a fast-paced, high-transaction environment.

My experience aligns precisely with Ricardo's needs:

Domain-Driven Design Mastery: I've applied strategic domain modeling across multiple industries, from e-commerce and energy trading to insurance and fitness marketplaces. My Master's thesis focused specifically on DDD, microservices architecture, CQRS, and event sourcing—earning top marks (Grade 1.0) and cementing my theoretical foundation. I've since put these principles into practice countless times, designing bounded contexts, conducting event storming sessions, and establishing domain coherence across distributed teams.

Large-Scale Platform Modernization: Throughout my career, I've led modernization initiatives for legacy systems handling significant transaction volumes. At Zühlke, I transformed a complex tax reporting system for private banking clients; at Axpo, I architected an energy data platform supporting international trading operations; and at my own venture, Stamy Booking, I built a complete SaaS platform from scratch. Each experience reinforced my ability to balance technical

debt with strategic architectural evolution—exactly what Ricardo needs as it modernizes while maintaining its beloved platform.

Cloud-Native Architecture: While my current work focuses on Azure, I have hands-on experience across multi-cloud environments including Google Cloud Platform (GCP), AWS, and hybrid setups. I've designed event-driven architectures, implemented microservices patterns, and built resilient distributed systems using Kubernetes, Docker, and Infrastructure as Code practices. I'm excited about leveraging GCP's capabilities to enhance Ricardo's scalability and developer experience.

Technical Leadership & Mentoring: I'm passionate about raising architectural maturity across organizations. At Digitec Galaxus, I mentor cross-functional teams, facilitate architecture workshops, and drive the adoption of best practices. I've pioneered AI-assisted development workflows that have significantly enhanced engineering productivity. I believe great architecture isn't just about technical decisions—it's about building consensus, enabling teams, and fostering a culture of continuous learning.

Strategic Alignment: I excel at translating business goals into long-term technical roadmaps. Whether collaborating with product leads, engineering managers, or C-level stakeholders, I ensure architectural decisions serve business objectives while maintaining technical excellence. I understand that Ricardo's CHF 1 billion in annual transactions demands both innovation and stability—a balance I've successfully maintained throughout my career.

SMG represents everything I've been working toward: the opportunity to make a meaningful impact on a platform that touches millions of lives, to work with a talented, diverse team that values Better Together, Aims High, and Acts Responsibly, and to contribute to the modernization of Switzerland's digital infrastructure. The Ricardo Platform is more than a professional opportunity—it's the perfect intersection of my technical expertise, architectural passion, and desire to build systems that truly matter.

I am ready to bring my full commitment to this role and am available to start with a three-month notice period from my current position. I would welcome the opportunity to discuss how my experience and vision can contribute to Ricardo's architectural evolution.

Thank you for considering my application. I look forward to the possibility of joining SMG and helping shape the future of Switzerland's leading marketplace.

Warm regards,

Roman Weis
